

A background photograph of three business professionals in an office setting. Two men and one woman are seated at a table, looking towards the camera with slight smiles. They are dressed in professional attire (suits and blouses). The image is partially obscured by blue geometric shapes in the corners.

TESTLABS

**SOFTWARE TESTING
SERVICE PROVIDER**

WHO ARE WE?

At Pragmatic Test Labs, we provide software **testing services** to a wide variety of IT and IT enabled organizations from different industry verticals **around the world**.

Our **passion** for software testing and drive for continuous growth enable us to provide high quality testing services– within budget and time. We consistently engage with our customers to provide them with customized testing solutions to suit their individual requirements. We achieve this by developing different methods and approaches to testing, engagement models as well as payment models.

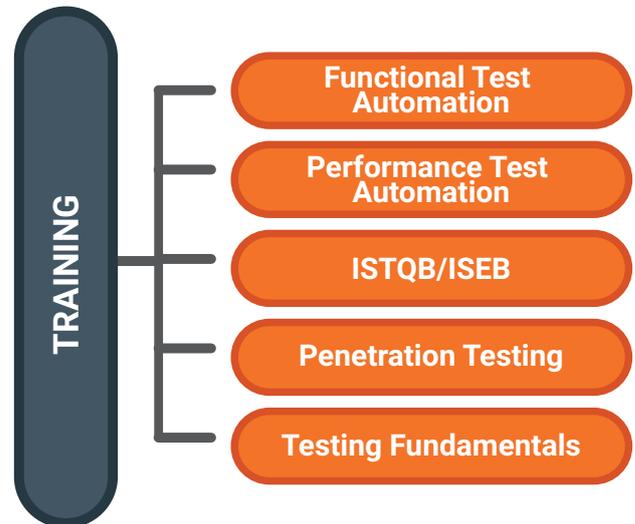

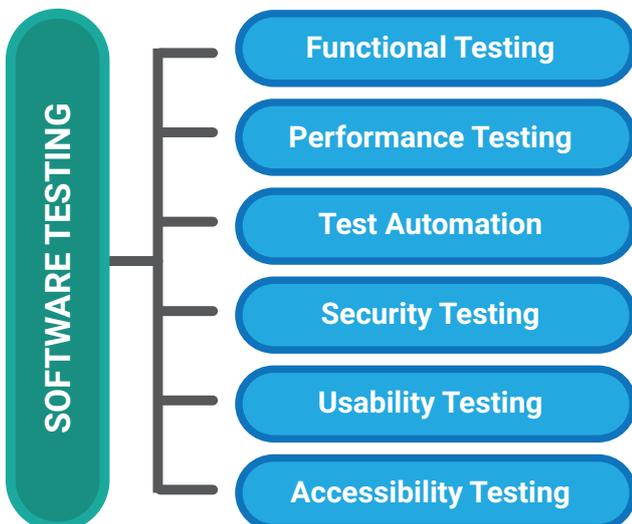

We introduce **simplicity into software testing** by removing unnecessary documentation, communications, testing tasks.

Our approach in Simplicity will increase productivity and ensures cost effective solutions to our customers.

We work with software testing communities around the world and contribute to the software testing community. This helps us to engage with top class software testing professional around the world and add value to our customers.

OUR SERVICE IN BRIEF

We provide wide range of software testing services to organizations and software testing related training to build competencies of your test engineers.

OUR SOFTWARE TESTING SERVICES

Functional Testing :

One of the most common, yet most important testing approaches is functional testing. Functional testing helps us ensure that your software meets the end users' functional requirements.

★ Tools & Techniques :

Effective test design tools and techniques are used to capture tests which will minimize the test execution effort.

★ Transparency :

Project related information is shared online with the stakeholder to review and make appropriate decisions.

Collaboration :

- ★ Seamless integration and collaboration with your process/team to understand the dynamic nature and requirement changes in the projects.

Experience :

- ★ Our experience spans from testing web applications to standalone applications developed for various domains. We have certified ISTQB, ISEB and CSTE testers.

Performance Testing :

Next to functionality, one of the most important aspects of a software application is how it performs under real-life situations where high data volume is involved. Through the effective use of testing tools such as JMeter®, OctoPerf® and cloud environments we are able to provide cost effective performance testing solutions. We strongly believe that being proficient in a testing tool is just one step in conducting effective performance testing. The right test scenarios, combinations, accumulated test results all bundled with our expertise produce the correct test report to make the right decision.

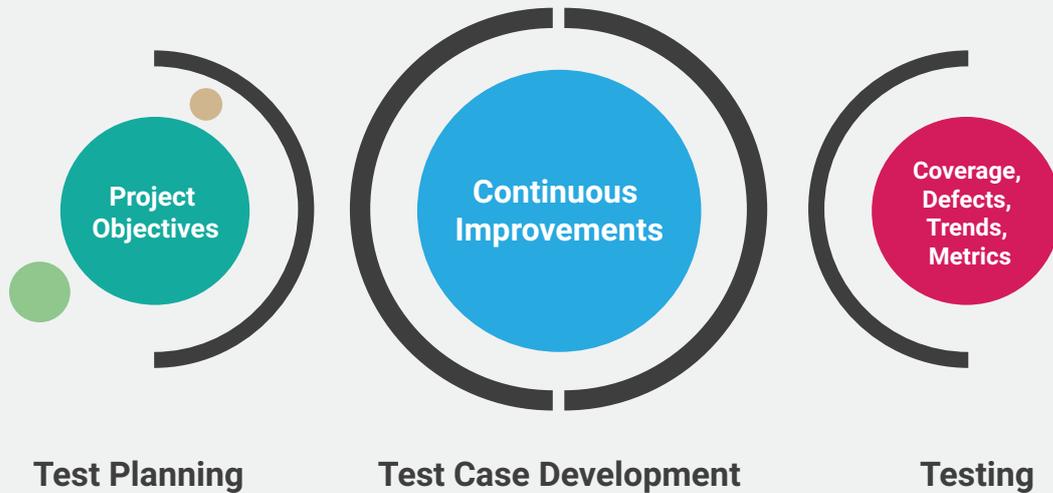

Test Automation :

Through some hand-picked tools available in the market today for test automation, we are able to provide quick turnarounds in delivering test results on your web applications.

1. **Selenium® WebDriver Develop** test cases through a range of features available in a wide spectrum programming languages
2. **Selenium Grid®** Distribute tests and minimizing test execution time
3. **Jenkins:** Continuous integration of the automated tests

End to End Testing :

We work closely with your development team to blend our testing approach and your processes by understanding testing needs from the very outset of software development.

The starting point is test planning where objectives are aligned with development and project objectives. Test cases are designed and shared online after reviewing the requirement specifications. These test cases are updated and improved as the requirements mature. When the project moves to the actual testing phase, the documented test cases are the bare minimum for us as we always go beyond the planned tests to widen the test coverage scope.

Test coverage, defects, trends, metrics and other suitable information required for various stakeholders are shared through an online portal for better information sharing

OUR PARTNERS

We partner with experts and services to provide significant value addition to our clients.

We work with sauselabs and crossbrowsertesting.com to provide high quality web application functional testing solutions.

OUR TRAINING PROGRAMS

Web Applications Functional Test Automation with Selenium

The training is customized at two levels : At the cooperate level to meet organizational needs and at the individual level to meet the delegates' needs, future aspirations, skills and current projects. Interactive and hands-on training sessions are conducted through applications with desired complexities. We share the sample scripts, lessons learned from real world projects and valuable tips.

Web Applications Performance Testing with JMeter

We train the delegates to use JMeter in real performance testing projects effectively and efficiently. Our training programs will include integrating JMeter with infrastructure providers like RedLine13.com and using OctoPerf for easier testing process.

Testing Fundamentals

This course provides you the knowledge and practical skills on testing fundamentals. The topics covered under this course will be Fundamentals of testing, Testing throughout the life cycle, Static testing, test design techniques, Test management, Best practices in testing, Tools support for testing. You will be given the opportunity to get hands on experience with testing tools by engaging in real projects.

Other Training Programs

- ISTQB/ISEB
- NLP and Soft Skills
- Penetration Testing
- Web Services

CUSTOMIZED HANDS-ON UP-TO-DATE with AFTER-TRAINING SUPPORT

GET US ENGAGED

How?

We offer a range of possible **options** for you to get us on board. Depending on your requirements, allocated budgets and project timelines we can **tailor make a package of services** for you.

■ **Assignment Based Testing**

This model is suitable when you want to control your own testing but need skilled testers to deliver the plan, under your supervision and at your office premises.

■ **Project Based Testing**

Suitable when you prefer to engage us on a project by project basis. Ideal in situations where you need specialized testing such as performance, automation and security or functional testing.

■ **Managed Service Testing**

- In this model we meet all your software testing needs, if required on premise. You gain superior testing capabilities at a lower cost than employing a specialist team inhouse.

Why?

Availability of an **experienced Quality Assurance Lead** to monitor and lead every

Why?

- We have worked with Australian customers already
- **Flexibility** in changing the **team size** based on project resource requirements through our pool of skilled resources
- **Task-based billing:** no hidden charges
- Complete **focus** on recruitment, testing and deliveries: you can focus on your core business
- we maintain the infrastructure required for the testing
- **Expertise** in many testing **tools**, testing **methods** and **processes** to improve productivity.

HASSLE FREE, COST EFFECTIVE, HIGH QUALITY TESTING SERVICES ON DEMAND

ABOUT PRAGMATIC

Our Team

We are a team with collective experience in executing software development and testing projects. Our team has worked with world's leading organizations, focusing on a wide spectrum of domains, tools and processes. We invest a significant time on continuously training our team on tools, process and techniques to provide a better service to our clients.

Customers

Our client base is strong and keeps growing. We have reached [Australia](#), Canada Sri Lanka, UK and USA already.

Our Values

- **Leadership**
We have courage to build a better future for those engage with us
- **Passion**
We are committed in heart and mind for the software quality
- **Profitability**
We look at profits as a means to develop Pragmatic Testers and the community too
- **People**
Our team makes all this possible. Developing personal and professional development is important to us.
- **Quality**
What we do, we exceed the expectations.

Our Vision

To build a world class **software testing company** by 2020, with first-class worldwide network of positive, competent professionals who can confidently bring considerable value to top the IT and IT enabled companies, organizations and government bodies around the world.

Objectives

We select best possible candidates, give them the best training and materials available anywhere, support them wholeheartedly and continuously, upgrade their skills and Knowledge to provide best possible software testing solutions to our clients.
